SUMMARY

Second-year Computer Engineering student (B.Tech, University of Mumbai, expected 2029) with a strong self-directed builder track record across full-stack, data, and AI-integrated projects. Comfortable moving fast from idea to working prototype, with growing interest in entrepreneurship and product building. Currently seeking internships and co-founder opportunities.

EDUCATION

B.Tech in Computer Engineering — Mumbai, Maharashtra — Second year

PROJECTS

MarineTrace

Satellite-Based Oil Spill Detection & Vessel Attribution

React, TypeScript, Python, FastAPI, U-Net, ResNet-34, AIS, Docker

- Built an end-to-end SAR satellite oil-spill detection and vessel-attribution pipeline using Sentinel-1 imagery, ML segmentation, AIS data, and geospatial analysis.
- Developed a U-Net + ResNet-34 model for slick segmentation and implemented vessel attribution using spatial, temporal, trajectory, and behavioral factors.
- Created a React/TypeScript GIS frontend and FastAPI backend with drift analysis, vessel search, investigation, and detection APIs; containerized with Docker.

Monte Carlo Wealth Simulator

github.com/aayush-debug/Monte-Carlo-Wealth-Simulator

- Built in Python (Streamlit, Geometric Brownian Motion) with KPI cards, dark-themed Matplotlib charts, and a summary statistics table.

BottleBuzz

github.com/aayush-debug/BottleBuzz

- TypeScript project.

CURRENTLY BUILDING

Pitch Connect (formerly LetsPitch)

- Startup-investor matchmaking platform with curated deal flow, AI-generated startup summaries, and a founder credibility score; built on Next.js/Supabase/Razorpay.

JARVIS-style AI Voice Assistant

Browser-based assistant using the Web Speech API and Claude API with a sci-fi, character-consistent persona.

SKILLS

Technical Skills

Python, Java, C, FastAPI, Automation & RAG, Vibe Coding, Software as a Service (SaaS)
